**INSECT GROWTH REGULATOR**

FOR INDOOR AND OUTDOOR USE ON ORNAMENTALS, TURF (INCLUDING COMMERCIAL LAWNS), VEGETABLES, AND OTHER HORTICULTURAL CROPS

**ACTIVE INGREDIENT:**
- Azadirachtin: 4.5%

**OTHER INGREDIENTS:**
- 95.5%

**TOTAL:**
- 100.0%

This product contains 0.39 lbs. (175 g) of azadirachtin per US gallon.

**EPA Reg. No.: 70051-9-59807**

If you have questions or comments regarding the use of this product, please call 1-800-356-4647.

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

Si usted no entiende la etiqueta, busque a alguien para que se la explique en detalle. If you do not understand this label, find someone to explain it to you in detail.

---

**FIRST AID**

**If in eyes:**
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

**If on skin or clothing:**
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

**If inhaled:**
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
- Call a poison control center or doctor for treatment advice.

**If swallowed:**
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything to an unconscious person.
- Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

---

**ENVIRONMENTAL HAZARDS**

This product may be hazardous to fish and aquatic invertebrates. For terrestrial uses: Do not apply directly to water, or

---

**Net Contents:** 1 Quart (32 fl. oz.) (946 mL)
to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters or rinsate.

**PHYSICAL AND CHEMICAL HAZARDS**

Combustible: Do not use or store near heat or open flame.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

---

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow workers entry into treated areas during the restricted entry interval (REI) of 4 hours. For early entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear:

- Coveralls.
- Chemical-resistant gloves, such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, polyvinylchloride (PVC), or Viton.
- Shoes plus socks.
- Protective Eyewear

**NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standards for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, or greenhouses. For other uses including golf courses, and other non-agricultural uses, do not enter treated areas without protective clothing until sprays have dried.

**INSECTS AND OTHER PESTS CONTROLLED BY AZATIN O**

- **Beetle Larvae, Weevil Larvae, and Grubs, such as:**
  - Bark Beetles
  - Bean Leaf Beetle
  - Billbugs
  - Black Vine Weevil
  - Blister Beetles
  - Bluegrass Weevil
  - Boll Weevil
  - Chafers (see list below)
  - Chestnut Weevil
  - Colorado Potato Beetle
  - Cucumber Beetles
  - Borers, such as:
    - Azalea Stem Borer
    - Bronze Birch Borer
    - Dogwood Borer
    - Dogwood Twig Borer
    - Iris Borer
  - Bugs, such as:
    - Boxelder Bug
    - Chinch Bug
  - Cankerworms, such as:
    - Elm Spanworm
    - Fall Cankerworm
  - Armyworms, Bollworms, Budworms, Caterpillars, Fruitworms, Loopers, Webworms, and Other Worms (Lepidoptera larvae), such as:
    - Armyworms
    - Bagworms
    - Beet Armyworm
    - Bollworm
    - Borers (see list above)
    - Cabbage Looper
    - Cabbage Butterfly
    - Cherry Fruitworm
    - Cori Earworm
    - Cutworms
    - Digger Moth
    - Diamondback Moth
    - Fall Armyworm
    - Grapefruit Worm
    - Grape Leaffolder
    - Grape Leaf Skeletonizer
    - Hickory Shuckworm
  - Chafers, such as:
    - European Chafer
    - Northern Masked Chafer
  - Crickets, such as:
    - Mole Cricket
  - Cutworms, such as:
    - Black Cutworm
    - Citrus Cutworm
  - Grasshoppers and Locusts
  - Leaffolders and Leaffiers
  - Leafhoppers, such as:
    - Aster Leafhopper
    - Grape Leafhopper

**CROPS ON WHICH AZATIN O CAN BE USED**

AZATIN O can be used on the following crops and in the following situations:

- Greenhouses and other covered structures (including lath and shade), inter-orscapes,turf, nurseries, and landscapes: For use on ornamental plants (follage and flowering plants, cut flowers, greens, shrubs), herbs, spices, vegetables, melons, strawberries, and other food crops raised to harvest or food crop plants raised for commercial resale, and nursery stock (including bearing and non-bearing fruit trees and grapevines).
- For all outdoor grown non-food crops including non-bearing fruit trees and other field grown foliage, flowering and ornamental plants.
- Can be used indoors and outdoors. Plants may be potted, grown in soil or soilless mixtures, or grown hydroponically.

**Bedding Plants, Foliage plants, Flowers, Potted Plants, and other Ornamental Plants, such as:**

- Actinopteris
- African Violet
- Ageratum
- Aglaonema
- Allamanda
- Algerian Ivy
- Alcaidita
- Anthurium
- Aphelandra
- Artemisia
- Aster
- Aucuba Illex
- Azalea
- Baby's Breath
- Begonia
- Bougainvillea
- Boston Fern
- Boxwood
- Brachycome
- Cacti
- Calabrese
- Caladium
- Calla
- Calatea
- Calendula
- Carnation
- Brassica (Cole) Crops, such as:
- Bok Choy
- Broccoli
- Broccoli Raab
- Brussels Sprouts
- Cabbage
- Bulb Vegetables, such as:
- Garlic
- Citrus Fruits, such as:
- Calamondin
- Citrus citron
- Grapefruit

**INSECTS AND OTHER PESTS CONTROLLED BY AZATIN O (continued next page)**
### CROPS ON WHICH AZATIN O CAN BE USED (continued)

**Cucurbit Vegetables, such as:**
- Balsam pear
- (Bitter Melon)
- Cantaloupe
- Gherkin
- Waxgourd

**Fruiting Vegetables, such as:**
- Eggplant
- Ground Cherry

**Herbs and Spices, such as:**
- Allspice
- Angelica
- Annatto
- Anise
- Angelica
- Allspice
- Chervil
- Carrot
- Cinnamon
- Cloves
- Balm
- Costmary
- Caper Buds
- Camomile
- Chervil
- Celery
- Cassia
- Cardamom
- Cabbage
- Celery Seed
- Catnip
- Celery Seed

**Leafy Vegetables, such as:**
- Arugula
- Cardoon
- Collard
- Celery
- Cardamom
- Cabbage
- Cabbage
- Chinese Celery

**Ornamental Trees and Shrubs, such as:**
- Andromeda
- Arborvitae
- Ash
- Aucuba Ilex
- Austrian Pine
- Azalea
- Beech
- Birch
- Birds Nest Spruce
- Blue Spruce
- Boxwood
- Butternut
- Cacti
- Camellia
- Ceanothus
- Cedar
- Chamaecyparis
- Cherry

**Pome Fruits, such as:**
- Apple
- Crabapple

**Root and Tuber Crops, such as:**
- Beet (all types)
- Carrot
- Cassava
- Celeriac
- Chervil
- Daikon

### CROPS ON WHICH AZATIN O CAN BE USED (continued)

**Small Fruits and Berries, such as:**
- Blackberry
- Blueberry
- Boysenberry
- Blueberry
- Elderberry
- Loganberry
- Strawberries
- Youngberry

**Stone Fruits, such as:**
- Apricot
- Apricot
- Cherry (all types)
- Apple
- Azalea
- Austrian Pine
- Aucuba Ilex
- Arborvitae
- Andromeda
- Arugula
- Annatto
- Anise
- Angelica
- Allspice
- Chervil
- Carrot
- Cinnamon
- Cloves
- Balm
- Costmary
- Caper Buds
- Camomile
- Chervil
- Celery
- Cassia
- Cardamom
- Cabbage
- Celery Seed
- Catnip
- Celery Seed

**Tropical and Subtropical Fruits, such as:**
- Banana
- Tropical and Subtropical Fruits, such as:
- Bananas

**Leafy Vegetables, such as:**
- Arugula
- Cardoon
- Collard
- Celery
- Cardamom
- Cabbage
- Cabbage
- Chinese Celery

**Ornamental Trees and Shrubs, such as:**
- Andromeda
- Arborvitae
- Ash
- Aucuba Ilex
- Austrian Pine
- Azalea
- Beech
- Birch
- Birds Nest Spruce
- Blue Spruce
- Boxwood
- Butternut
- Cacti
- Camellia
- Ceanothus
- Cedar
- Chamaecyparis
- Cherry

**Pome Fruits, such as:**
- Apple
- Crabapple

**Root and Tuber Crops, such as:**
- Beet (all types)
- Carrot
- Cassava
- Celeriac
- Chervil
- Daikon

### General Information

- **Broad Spectrum Insect Growth Regulator Insecticide**
- **Not for use in food-handling establishments.**
- **Shake well before using.**
- **Kills only immature stages (larvae or nymphs) of insects. Treated larvae may die as pupae.**
- **Make applications when pests first appear and are in their early larval stages. Repeat applications every 7 days or as needed.**
• Botanical Insecticide Concentrate.
• Formulated for interiorscape use.
• For indoor and outdoor use.
• Spraying directly onto the pest and a longer duration of leaf wetting increases effectiveness. Apply in early to mid-morning or late afternoon.
• The pH of spray solution containing AZATIN O must be kept between 3 and 8. Use spray solutions within several hours of preparation for maximum effectiveness. Do not store diluted solution for later use.
• Do not apply to wilted or otherwise stressed plants, or to newly transplanted material prior to root establishment. Do not apply to known spray sensitive plants without testing.
• AZATIN O has been found to be compatible when used in conjunction with most beneficial insects. Conduct a small trial to assure compatibility before using on a large scale.
• Use with care when applying near streams, ponds, lakes or bodies of water.
• Do not apply AZATIN O when weather conditions favor drift or the likelihood of runoff is high.
• For best results, add a spreader-sticker or oil-based adjuvant (such as methylated seed oil) at the label rate.

This product may be pre-mixed in a supply tank with water, fertilizer or other appropriate agricultural chemicals. Agitation is necessary (see Mixing Directions). Crop injury or lack of effectiveness can result if uniform distribution is not achieved.

When pest populations are high, use the higher label rates.

SPRAY APPLICATION:
High volume: If plant foliage is dense, use higher label rates and increase spray volume to obtain uniform and complete coverage. Low and ultra-low volume: Apply AZATIN O at rates of 4 to 16 fluid ounces per acre in a minimum of 3 gallons of water per acre. For best results, ensure uniform and complete plant coverage.

DRENCH APPLICATION:
AZATIN O is effective as a soil drench for control of soil dwelling insect larvae such as fungus gnats. It is also effective as a soil drench for control of both foliar and soil dwelling pests, particularly when alternated with foliar sprays of AZATIN O. Apply AZATIN O in sufficient water and for sufficient duration so as to distribute the application rate evenly to the entire treated area.

Apply to moderately moist soils. Use volumes that thoroughly wet the soil, but do not cause significant surface runoff or excessive drip from pots.

CHEMIGATION:
Refer to the attached “Chemigation Bulletin” for use directions for chemigation. Do not apply this product through any irrigation system not specifically included in the Chemigation Bulletin.

MIXING DIRECTIONS:
AZATIN O must be mixed with water for application. Do not apply undiluted product to plants. For best results:
1. Use clean equipment and clean water.
2. Add 1/2 to 3/4 of total water volume to the tank and begin agitation.
3. Add pesticide to the tank.
4. Add water up to full intended spray volume and mix thoroughly before applying.
5. Adjust pH of the spray solution to between 3 and 7, if necessary.
6. Apply pesticide mix immediately after mixing.
7. If the mixture is not applied immediately, agitate before application.
8. Thoroughly clean equipment following application.

TANK MIXTURES OR FLUID FERTILIZERS:
1. Before using this product in a tank mix with fertilizer or registered pesticide, determine compatibility by conducting a compatibility test with a small amount of each product.
2. Observe all cautions and limitations on labels of all products used in combination.
3. Follow all tank mix directions and observe limitations listed in the combination product(s) label.

COMPATIBILITY TEST:
Perform a compatibility test before tank mixing this product with other product(s) or liquid fertilizer(s). Fill three separate 1 quart jars with 1 pint of water and fertilizer. To a first jar add this product and mix well. To a second jar, add the desired other tank mix product(s) and mix well. To a third jar, combine this product with the other tank mix product(s) and mix well. If more than one product is used, add them separately with dry formulations first, flowables next, and emulsifiable concentrates last. After each addition, shake or stir gently to thoroughly mix. For the appropriate amount of product for this test use the following:
- Dry products - For each pound to be applied per acre, add 1.5 level teaspoons to each jar.
- Liquid products - For each pint to be applied per acre, add 0.5 teaspoons or 2.5 ml to each jar.

Note any differences between the mixtures in the jars (compounds alone vs mixtures) after 15 minutes. Look for evidence of physical incompatibility such as clumping, precipitation, oily residues on the sides of the glass or other signs of incompatibility. If either mixture separates, but can be readily re-mixed, the mixture can be sprayed as long as good agitation is used. If the mixtures are incompatible, do not use the mixture.

TANK MIX COMPATIBILITY
AZATIN O:
Biological Insecticide has been found to be compatible with most commonly used fungicides, insecticides, and fertilizers. Check physical compatibility first by using the correct proportion of products in a small jar test. Then, test tank-mix combinations for phytotoxicity on a sample of plants prior to use. This must be done with combinations used before as environmental conditions can alter the interaction between compounds. Due to the wide variation in climatic conditions, cultural practices, and other factors, the user assumes full responsibility for any crop damage or other liability resulting from the use of AZATIN O in a tank mix combination. Do not mix AZATIN O with oxidizing agents such as bleach, or strong acids and bases as they will destabilize the product.

GENERAL DIRECTIONS FOR INTERIORSCAPES, ORNAMENTAL PLANTS, LANDSCAPES, TREES, SHRUBS, LAWNS, TURF, AND GREENHOUSES
For use to control whiteflies, thrips, mealybugs, leafminers, loopers, caterpillars, beet armyworms, aphids, and other pests on bedding plants, potted plants, foliage plants, ornamentals, trees, and shrubs in and around greenhouses, commercial nurseries, and interiorscapes.

For use to control insect pests of field-grown cut flowers and greens.
For use to control gypsy moths, weevils, psyllids, webworms, hornworms, spruce budworms, tent caterpillars, sawflies, and other pests on trees and shrubs in commercial landscapes.

**AZATIN O** may be used on fruits, vegetables, vegetable transplants, and herbs both inside and outside of the greenhouse.

Apply on a preventative 7 – day schedule or at the first sign of insect presence. This schedule is effective under low insect pressure. Under high insect pressure, apply every 3 – 4 days.

**For Field-Grown Cut Flowers and other Field-Grown Ornamental Plants:** Apply **AZATIN O** at 4 – 16 fluid ounces per acre in sufficient volume of water to achieve uniform and thorough spray coverage. For conventional ground application equipment, apply 30 – 100 gallons of spray mix per acre. For low volume application, apply 0.5 pint (8 fluid ounces) of **AZATIN O** per acre in sufficient water to provide adequate coverage.

**For Use in Greenhouses, Landscapes, Interiorscapes, and Nurseries:** Dilute **AZATIN O** at 4 – 16 fluid ounces per acre in sufficient volume of water. Mix thoroughly. Apply at 25 – 40 psi with hand sprayer or 100 – 200 psi with power sprayer as a fine spray to all foliage and fruit surfaces to runoff (typically 1 – 2 gallons of spray per 1,000 sq. ft.). Avoid excessive application.

For drench applications, use 8 – 16 fluid ounces of **AZATIN O** per 100 gallons of water and apply at the rate of 1 quart of diluted solution per square foot of growing media surface. Repeat at 14-day intervals during the growing season.

---

**DIRECTIONS FOR REPELLING JAPANESE BEETLES FROM ROSE PLANTS**

For best results, apply to roses at the first sign of Japanese beetle emergence in early summer at the rate of 0.5 pint of **AZATIN O** per 100 gallons of water.

**AZATIN O** is more effective when used as a preventative.

Spray to run-off, making sure to completely cover all parts of the plant, including buds and flowers.

Repeat application weekly, after rainfall or during periods of rapid plant growth as new growth that occurs after application is not fully protected. Continue applications as long as adult beetles are present.

Do not spray water directly onto foliage or otherwise wash off the leaves after treatment. This will reduce the effectiveness of the application.

After initial application, some beetles may be present on foliage but they will not feed on it.

**DIRECTIONS FOR LAWNS AND TURF**

**Surface-Feeding Insects:**

For use to control cutworms, armyworms, sod webworms, crickets, chinch bugs, leafhoppers, and grasshoppers.

Apply at first sign of pest presence or damage to turf. Do not apply if rain is forecast within the next 24 hours.

Apply 1 quart – 3 gallons of **AZATIN O** per acre (or 0.75 – 9 fluid ounces per 1,000 square feet) using enough spray volume to obtain thorough coverage and penetration of the turf canopy. Use 2 – 5 gallons of diluted material per 1,000 square feet, or 50 – 100 gallons of diluted material per acre.

The treated area may be lightly irrigated for 3 – 5 minutes after application if desired to increase penetration of the turf surface. However, do not water turf again for 2 days after application.

Reapply as needed to maintain control of turf damage. Be sure to treat under shrubs and plants bordering houses or other structures.

**Subsurface-Feeding Insects:**

Mow and irrigate turf prior to application. The treated area may be lightly irrigated for 3 – 5 minutes after application if desired.
to increase penetration of the turf surface. Do not water turf again within 24 hours after application. Do not mow again within 3 days after application.

For use to control white grubs (Japanese beetles, European chafer, June beetles, green June beetles, May beetles, annual white grubs, grub beetles, southern masked chafer, etc.) and crane fly larvae (leatherjackets):

- For white grubs, make application soon after adults emerge in summer (1 – 3 weeks after first sign of adults). Leatherjackets should be targeted as young larvae while feeding near the soil surface.
- Apply 1 quart – 3 gallons of AZATIN O per acre (0.75 – 9 fluid ounces per 1,000 square feet) using enough spray volume to obtain thorough coverage and penetration of the turf. Use 50 – 100 gallons of diluted material per acre, or 2 – 5 gallons of diluted material per 1,000 square feet.

For use to control mole crickets:

- Apply 1 quart – 3 gallons of AZATIN O per acre (0.75 – 9 fluid ounces per 1,000 square feet) using enough spray volume to obtain thorough coverage. Use 2 – 5 gallons of diluted material per 1,000 square feet, or 50 – 100 gallons of diluted material per acre.
- For best results, apply when nymphs are small, in the early spring. If necessary, reapply at 1 – 2 week intervals.

For use to control billbugs:

- Apply in mid to late spring or at first sign of pest emergence or damage.
- Apply 1 quart – 3 gallons of AZATIN O per acre (0.75 – 9 fluid ounces per 1,000 square feet) using enough spray volume to obtain thorough coverage. Use 50 – 100 gallons of diluted material per acre, or 2 – 5 gallons of diluted material per 1,000 square feet.
- Reapply as necessary. Repeat treatment in early to mid fall to control possible second generation.

Nematodes:
Apply 1 quart – 3 gallons of AZATIN O per acre (0.75 – 9 fluid ounces per 1,000 square feet) using enough spray volume to obtain thorough coverage. Use 50 – 100 gallons of diluted material per acre. Use 2 – 5 gallons of diluted material per 1,000 square feet. Repeat as necessary.

**DIRECTIONS FOR GREENHOUSE AND NURSERY-GROWN FOOD CROPS**

<table>
<thead>
<tr>
<th>Application Rates for Key Insect Pests of Vegetables Raised to Harvest (including Transplants for Commercial Resale), Fruits, and Nut Crops Grown in Greenhouses, Lath and Shade Houses, and Nurseries.</th>
<th>Rate of AZATIN O per 100 gallons of water*</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pests controlled by AZATIN O</td>
<td>Remarks</td>

<tr>
<td><strong>Leafrollers</strong></td>
<td>4 – 16 fl. oz.</td>
<td>Foliar application against larvae.</td>
</tr>
<tr>
<td><strong>Scales</strong></td>
<td>6 – 16 fl. oz.</td>
<td>Foliar or stem application targeting crawler stages.</td>
</tr>
<tr>
<td><strong>Whiteflies</strong></td>
<td>6 – 16 fl. oz.</td>
<td>Foliar application against nymphs. Spray should be directed to undersides of leaves.</td>
</tr>
</tbody>
</table>

**When using lower rates (less than 10 fl. oz.), combine AZATIN O with an approved adjuvant such as a non-phytotoxic crop oil, up to 1% for improved spray coverage and translaminar uptake. Always use sufficient spray volume to ensure good coverage of all plant parts. Treat early and target youngest larvae or nymphs for best control. Repeat applications every 7-10 days or as needed to maintain control.**
### CHEMIGATION BULLETIN

**GENERAL INFORMATION:**
Apply this product only through drip (trickle); sprinkler (solid set, lateral move, end tow, side-roll, center pivot, or hand move); flood (basin); furrow; or border irrigation systems. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Public water systems means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection.

The pesticide injection pipeline must contain a functional, normally closed, solenoid operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment.

**DRIP TRICKLE CHEMIGATION:**

1. The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump such as a positive displacement injection pump (i.e., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Dilute the product in water following the label mixing directions. It may be premixed in a supply tank with water, fertilizer, or other appropriate tank-mixed agricultural chemicals. Agitation is necessary. Apply to moderately moist soils. Use volumes that thoroughly wet the soil but that do not cause significant runoff or excessive drip from pots. Application should be continuous in sufficient water to apply the recommended rate evenly to the entire treated area.

### WARRANTY

OHP, Inc. warrants that the material contained herein conforms to the description on the label and is reasonably fit for the purposes referred to in the directions for use. Timing and method of application, weather, watering practices, nature of soil, the insect problem, condition of the crop, incompatibility with other chemicals not specifically recommended, and other influencing factors in the use of this product are beyond the control of the seller. To the extent consistent with applicable law, buyer assumes all risks of use, storage or handling of this material not in strict accordance with directions given herein. NO OTHER EXPRESS OR IMPLIED WARRANTY OF THE FITNESS OR MERCHANTABILITY IS MADE.

### Storage and Disposal

Do not contaminate water, food or feed by storage and disposal.

**PESTICIDE STORAGE:** Do not store above 100 degrees F or below -20 degrees F for extended periods of time. Keep containers tightly closed when not in use.

**PESTICIDE DISPOSAL:** Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

**CONTAINER HANDLING:** Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two or more times. Then offer for recycling, if available or puncture and dispose of in a sanitary landfill, or by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.
SPRINKLER CHEMIGATION:

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2. The pesticide injection pipeline must also contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (i.e., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Dilute the product in water following the label mixing directions. It may be premixed in a supply tank with water, fertilizer or other appropriate tank-mixed agricultural chemicals. Agitation is necessary. Apply when soils are moderately moist. Use volumes that thoroughly wet the foliage and/or soil but that do not cause significant runoff or excessive drip from pots. Application should be continuous in sufficient water to apply the recommended rate evenly to the entire treated area.
8. Do not apply when wind speed favors drift beyond the area intended for treatment.

FLOOD (BASIN), FURROW AND BORDER CHEMIGATION:

1. Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential of water source contamination from the backflow if water flow stops.
2. Systems utilizing a pressurized water and pesticide injection system must meet the following requirements:
   a. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
   b. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
   c. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
   d. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
   e. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
   f. Systems must use a metering pump, such as a positive displacement injection pump (i.e., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
3. Dilute the product in water following the label mixing directions. It may be premixed in a supply tank with water, fertilizer, or other appropriate tank-mixed agricultural chemicals. Agitation is necessary. Apply to moderately moist soils. Use volumes that thoroughly wet the soil but that do not cause significant runoff. Application should be continuous in sufficient water to apply the recommended rate evenly to the entire treated area.
