NOTAVO®
OVICIDE/MITICIDE

A SUSPENSION CONCENTRATE (SC) FOR MITE MANAGEMENT ON COMMERCIAL ORNAMENTAL PLANTS IN GREENHOUSES, SARAN AND SHADE HOUSES, OUTDOOR CONTAINERS, AND FIELD-GROWN NURSERY STOCK.

Product Information Bulletin 156

GENERAL INFORMATION
Notavo® Ovicide/Miticide is highly effective at controlling eggs and early mite stages. As a selective ovicide, it is a critical part of any spider mite control program. Notavo is a suspension concentrate containing 1 pound of clofentezine per quart.

Common Name: Clofentezine
Class: Tetrazines

GROUP 10A INSECTICIDE
Packaging: 16 fluid ounce (pint) container, 8 per case

RESTRICTED ENTRY INTERVAL (REI) AND SIGNAL WORD
REI = 12 hours Signal Word = CAUTION

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicator and other handlers must wear:
- long-sleeved shirt and long pants
- shoes plus socks
- chemical resistant gloves made of barrier laminate, butyl rubber (> 14 mils), nitrile rubber (> 14 mils), neoprene rubber (>14 mils), polyvinyl chloride (> 14 mils), or Viton (> 14 mils)

ADVANTAGES OF NOTAVO
- Long-term residual activity
- Active against eggs and immature stages
- Virtually harmless to predacious mites and beneficial insects
- Reduced-risk pesticide classification
- Stable across a wide range of pH tank solutions
- Magenta color aids in detecting proper spray coverage

MODE OF ACTION
Notavo is effective on eggs and immature stages of two-spotted spider mites and other common mites through both contact and ingestion. Notavo works by inhibiting the growth of mites. Notavo is an ideal fit in a miticide resistance management strategy.

USE SITES
Notavo may be used for mite management on commercial ornamental plants in greenhouses, saran and shade houses, outdoor containers and field-grown nursery stock.

TARGET PESTS CONTROLLED
- Two spotted spider mite
- Pacific spider mite
- McDaniel spider mite
- European red mite
- Yellow spider mite

APPLICATION AND RATES
Notavo application rates per 100 gallons of water:
2.0 to 8.0 fluid ounces. Notavo is most effective when applied at the first sign of mite activity and egg laying. Apply Notavo in sufficient water to ensure uniform and thorough coverage of foliage.

TANK MIXING
Notavo can be combined with most commonly used pesticides and is stable across a wide range of pH. For broad-spectrum control, Notavo may be tank mixed with most other miticide/insecticide products.
Notavo and various tank mix combinations, including spreader stickers and adjuvants, have not been tested on all plant species and the many varieties of each. Tank mix combinations should be trialed on a small-scale basis before any large-scale use.
RESISTANCE MANAGEMENT

When used as directed, Notavo is effective on a wide variety of mite species. Notavo shows efficacy on most mite life cycle stages.

Users should not make successive applications of Notavo. Users should apply Notavo as part of a resistance management strategy program that includes rotation with other miticides with different modes of action.

RESTRICTIONS & LIMITATIONS

- Notavo should not be used through any type of irrigation system.
- Do not apply Notavo more than once per crop cycle in greenhouse, saran and shade house culture.
